The menstrual cycle Answers To The Menstrual Cycle
The secretory phase of the menstrual cycle begins after ovulation when the ruptured graafian follicle develops into the corpus luteum. The corpus luteum produces progesterone which causes the endometrium to begin secreting various substances which make the uterus more receptive to implantation of a fertilised ovum. Reproductive system quiz on the woman's menstrual cycle for the NCLEX exam. In your maternity class and on the NCLEX exam, you will need to know about the woman's menstrual cycle. It is important to know what days each phase

occurs, the role of hormones (such as FSH, LH, estrogen, and progesterone), and what happens during each phase of the reproductive cycle.

Menstrual Cycle NCLEX Quiz - registerednurse.com

The menstrual cycle is the monthly hormonal cycle a female's body goes through to prepare for pregnancy. Your menstrual cycle is counted from the first day of your period up to the first day of your next period. Your hormone levels (estrogen and progesterone) usually change throughout the menstrual cycle and can cause menstrual symptoms.

Your menstrual cycle | womenshealth.gov

While menstrual cycle irregularities usually aren't serious, sometimes they can signal health problems. What's the menstrual cycle? The menstrual cycle is the monthly series of changes a woman's body goes through in preparation for the possibility of pregnancy.

Menstrual cycle: What's normal, what's not - Mayo Clinic

The phases of the menstrual cycle include:

- Menstrual phase:** when uterus lining sheds.
- Follicular phase:** when eggs begin to mature in the ovary.
- Ovulation phase:** when eggs are released from the ovary.
- Luteal phase:** when the uterus lining plumps up.

What are the stages of menstrual cycle - Answers

The menstrual phase is the first stage of the menstrual cycle. It's also when you get your period. This phase starts when an egg from the previous cycle isn't fertilized. Because pregnancy hasn't taken place, levels of the hormones estrogen and progesterone drop.

Stages of Menstrual Cycle: Menstruation, Ovulation ...

The day count for menstrual cycle begins on the first day of menstruation when blood starts to come out of the vagina. In this section, the length of menstrual cycle has been assumed to be 28 days (which is the average among women).

Phases of

Menstrual cycle

The parts of the body involved in the menstrual cycle include the brain, pituitary gland, uterus and cervix, ovaries, fallopian tubes, and vagina. Body chemicals called hormones rise and fall during the month and make the menstrual cycle happen. The ovaries make two important female hormones, estrogen and progesterone.
