Six Sigma Black Belts are  
expected to have the  
skills of a good

experimenter, possessing  
both a deep  
understanding of statistics  
and a knowledge of the  
industry in which they  
work. This book is written  
for the Six Sigma Black  
Belt who needs an  
understanding of many  
statistical methods but  
does not use all of these

methods every day. It is  
intended to be used as a  
quick reference, providing  
basic details and  
formulas. The methods  
presented here are laid  
out according to the Six  
Sigma DMAIC (Define,  
Measure, Analyze,  
Improve, Control) phases  
in which they are typically

used. Included in appendices are a flowchart that provides the correct statistical test for a given use and type; flowcharts depicting the five steps for hypothesis testing; the statistical formulas in tables to serve as a quick reference; and statistical tables.

This book is written for the Six Sigma Black Belt who needs an

understanding of many statistical methods but does not use all of these methods every day. It is intended to be used as a quick reference, providing basic details, step-by-step instructions, and Minitab statistical software instructions. Six Sigma Black Belts typically use a statistical program such as Minitab to perform calculations, but an understanding of the underlying statistics is still needed. Anybody can type data into a program; a Black Belt must be capable of understanding

which hypothesis test is appropriate for a given use, as well as the assumptions that must be met to correctly perform the hypothesis test. The methods presented here are laid out according to the Six Sigma DMAIC (Define, Measure, Analyze, Improve, Control) phases in which they are typically used. However, these methods can also be applied outside of a Six Sigma project, such as when one simply needs to determine whether there is a difference in the

means of two processes  
producing the same parts.  
A Six Sigma Black Belt

using Statistics for Six  
Sigma Black Belts will be  
able to quickly zero in on  
appropriate methods and

follow the examples to  
reach the correct  
statistical conclusions.
